

A small header

"CSS inside" ;) so that you can choose most of the display style

Name	Size	Description
 Parent Directory	-	
 Picture.pdf	101k	a screen capture of this window
 btgrdk.gif	3k	the background picture used by CSS
 my HEAD.html	0k	the header including CSS formatting
 my HEADFOOT.html	0k	the footer, AKA ReadMe file
 my_HTTP.conf	1k	here you can read the basic apache config for this display

here is the footer, you can put HTML in [that file](#), so that the output is formatted

If you intend to use CSS or sophisticated HTML code, you'll probably want to close this file with `</body>` and `</html>` tags.
